# Open-AudIT

Network Discovery and Inventory Software

FirstWave

Discover what is on your network today! - Save yourself time, money and effort with Open-AudIT. A smooth front-end, business-focused reporting and comprehensive discovery for more devices, Open-AudIT is the only tool you'll want to audit your network. Using an agentless framework, Open-AudIT will audit your network, on your schedule, with no impact to user experience. The device discovery engine scans your provided network and intelligently stores the configurations of every discovered component giving you information such as hardware information, software licensing, configuration changes, non-authorized devices, capacity utilization, and hardware warranty status. Integration with NMIS is an easy 3 step process, so gathering device information alongside performance statics and configuration data has never been more straightforward.

Discover Every Device
Easily create network discovery profiles and then run a discovery with a single click or even automated.

Configuration Change Management
Track and report on IT asset configuration changes as well as software licensing, shadow IT and hardware warranty status.

Scheduled Reporting
Using the scheduler will give you the results by email, JSON, CSV, XML or HTML.

Controlled Role Based Access
Open-AudIT's user roles have a set of permissions (Create, Read, Update, Delete) for each endpoint. Roles can also be used with LDAP (Active Directory and OpenLDAP) authorisation.

Configuration Baselines
The compliance system compares software, hardware, users and netstat data against your required standard.

Software Licensing
Get definitive lists of all of your software licensing alongside your asset management. Get historical snapshots for easy comparison
